Summary

Data Analyst with hands-on experience across the full analytics lifecycle, including dashboard design, reporting, and predictive modeling. Skilled in Python, SQL, and Power BI, with growing exposure to machine learning and automated pipelines. Identified 4,218 infringement cases that worth an estimated \$2.64M AUD in potential infringement value through model optimisation. Motivated to bring my enthusiasm and data analytics expertise to deliver insightful reports that support business goals.

Experience

One Task

Mar 2023 – Current

Data Analyst

Docklands, VIC

- Developed Power BI dashboards analysing cost-versus-performance trade-offs across 20 systems, supporting resourcing and reporting decisions for senior and engineering stakeholders.
- Designed and helped deploy a computer-vision detection model in Python, lifting detection performance by 8% over the prior solution and flagging 4,218 potential infringement cases worth an estimated \$2.64M.
- Automated a weekly recurring pipeline to reduce manual data processing and improve reproducibility across training runs.
- Conducted 3,500+ daily AI-processed records reviews in Excel, feeding accuracy KPIs into a shared Google Sheets for senior stakeholder reporting.
- Collaborated with engineering teams via Outlook to troubleshoot system issues and authored clear incident reports for clients, eliminating subsequent data loss and streamlining the recovery of missing operational hours.

Constellation Technologies Limited

Jul 2024 – Nov 2024

Data Analytics Intern

Melbourne, VIC

- Built a data extraction model in Python to capture food-label details from different suppliers, powering an app that delivers instant insights to clients.
- Developed a machine-learning anomaly-detection solution to identify extreme data points in temperature readings, supporting operational forecasting and product quality assurance.
- Improved Power BI dashboards and reporting with root-cause analysis to explain factors driving redundant goods costs, uncovering cost variances that support pricing strategies.

Projects

Bank Churn Analysis 📊

- Built RFM segmentation logic in SQL on a 10,000-customer dataset and developed Power BI dashboards visualising churn risk and retention trends, delivering clear recommendations for each customer segment.
- Spotted a counter-intuitive trend where the most engaged customers were the ones most likely to churn, translating findings into clear insights for stakeholders.
- Tracked and fine-tuned different model versions using Python, deploying the best-performing XGBoost model via Streamlit to generate real-time forecasts.

Sales Forecasting Project 📈

- Led a five-member team through the full data lifecycle, running weekly team meetings and supervisor updates to communicate progress and manage competing priorities.
- Applied K-means segmentation to investigate the effects of promotion and customer data on sales, and validated sales predictions over a 4-week horizon using tree-based methods.

Skills

Languages: Python, SQL, R

Analytics & Visualisations: Power BI, Excel

Dev & Collaboration Tools: Git, GitHub, Linux, Teams, Outlook

Competencies: Root-Cause Analysis, Reporting & Documentation, Non-technical communication, Process Automation & Continuous Improvement, Machine Learning

Education

Monash University

Bachelor of Applied Data Science Advanced (Grade: First Class Honours)

Graduated – Dec 2025

Clayton, VIC
